(5) Shuttle for automatic cotton loom (equipped with cast iron threader). (6) Shuttle for silk or rayon loom (equipped with Paterson tension and fibre covered on one side).

LOWELL BOBBINS

Maple, birch or beech wood, as required. For spinning, twisting or weaving of cotton, wool, worsted, rayon or silk. Wood is well seasoned and kiln dried (when necessary). Finished with oil, lacquer, shellac or baked-on enamel, as required. All operations performed by experienced craftsmen.

LOWELL SHUTTLES

Widely recognized for their quality for nearly half a century, Dogwood or persimmon, fibre covered or plain, as specified, for weaving of cotton (including duck), wool, worsted, silk, rayon, paper and carpets. Fibre covering protects delicate yarns and is applied to STAY. Wood is thoroughly seasoned, kiln dried and finished to specifications.

AUTOMATIC TENSION EYE

Highly efficient in weaving of rayons, fine worsteds and fine cottons. Furnished when specified. Two hardened steel plates, pushed together by adjustable coiled springs effect more precise control in weaving.
