SHJ Enterprises

Our Mission:

To design develop and implement software solutions to improve all aspects of business management in an industry relatively untouched by technology, thus creating a complete management solution for our clients and their businesses.

Software Engineer Job Responsibilities:

Develops information systems by designing, developing, and installing software solutions.

Software Engineer Job Duties:

- Determines operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions.
- Documents and demonstrates solutions by developing documentation, flowcharts, layouts, diagrams, charts, code comments and clear code.
- Prepares and installs solutions by determining and designing system specifications, standards, and programming.
- Improves operations by conducting systems analysis; recommending changes in policies and procedures.
- Obtains and licenses software by obtaining required information from vendors; recommending purchases; testing and approving products.
- Updates job knowledge by studying state-of-the-art development tools, programming techniques, and computing equipment; participating in educational opportunities; reading professional publications; maintaining personal networks; participating in professional organizations.
- Protects operations by keeping information confidential.
- Provides information by collecting, analyzing, and summarizing development and service issues.
- Accomplishes engineering and organization mission by completing related results as needed.
- Develops software solutions by studying information needs; conferring with users; studying systems flow, data usage, and work processes; investigating problem areas; following the software development lifecycle.

Software Engineer Skills and Qualifications:

- Bachelors of Science in Computer Science or equivalent work experience required.
- 5+ years of development of mission critical systems, including server side development
- Strong hands-on and practical experience with the following platforms and technologies:
  - Java & J2EE: Spring, Hibernate, JDBC, SQL, JMS, , Web Services, .net, C#, SOAP, Rest, etc.
  - Expert knowledge and experience in Java and .net
  - Expert knowledge of media players
- Expert level understanding of web MVC architectures
- Expertise in design/implementation for availability, scalability, reliability and performance
- Expertise in modern database/storage technologies including databases (sequel server)
- Expertise in designing and building web applications and/or web services in a distributed environment
- Experience working in cross-functional teams
- Strong written and oral communication skills, ability to multi-task, establish priorities and meet tight deadlines

Equal Opportunity Employer

If your skillset is within our needs, and you are interested in being a frontrunner for technology development in an industry that has not been exposed to innovation, we look forward to reading your resume and meeting you. We are looking for a team player that can submerge him or herself into the needs of our project with the intent of fully grasping the potential and need for a software that provides reliability consistency and productivity within the industry we are serving.

Thank You For Your Consideration and Application
