Business Intelligence Developer

Job Description:

The Business Intelligence Developer utilizes the latest business intelligence solutions including COGNOS and SQL Server to develop relational databases. Works with business users and customers throughout project life cycle for projects related to multidimensional data analysis and reporting solutions. Supports existing multidimensional cubes in order to create Analysis reports. Develops and delivers end user training for Business Intelligence solutions. Maintains user manuals, explores concepts such as web-based training, etc. Work with the Team to define, design, develop, and implement data processes, software and reporting solutions.

Skills/Qualification:

The ideal candidate will have prior knowledge of database concepts, and Master’s Degree in Computer Science, Computer Information Systems, Computer Engineering, Software Engineering, or related field.
You need new knowledge, skills and insights to achieve your goals and sustain your competitive advantage. SQA Labs’ executive program, known as Knowledge Enhancement Program (KEP), provides the edge you need to stay ahead in today’s dynamic global marketplace.

**How It Works**

“Real-world Knowledge Enhancement with real-value”

We’ve developed our Knowledge Enhancement Program by combining real-world testing methodology with lessons learned over years of hands-on practice and research. KEP materials are revised on an on-going basis to reflect the latest technologies, development methods, and testing techniques that we discover through our involvement with software testing and development organizations.

Because SQA Lab’s KEP is dedicated to professionals such as you, our education offers unsurpassed convenience, efficiency, and value. You’ll learn from industry leaders who average 10-16 years of practical experience. In addition to holding a master’s or doctoral degree, your instructors hold high level positions within the fields they teach. As a result, they are equally adept at discussing the latest and the most recent industry practices.

**SQA LAB’s KEP MISSION:**

We develop high-potential individuals to serve the advanced software engineering, QA and software management needs of our clients.

Are you facing increasing global competition and fast-paced change regardless of your education or career path?

- SQA Labs offers cutting edge knowledge enhancement and learning opportunities in software engineering practices.
- We also offer the world’s best businesses an extensive array of global software engineering opportunities, services and resources.
- We routinely **deliver creative, global, innovative, specifically tailored and cost-effective business solutions** to clients who range from global multinationals to leading regional organizations, in almost every industry and regional market in the world.
Our KEP group sizes are purposely kept small to encourage active participation and lively discussions. This enables us to leverage the combined experience of the whole class to cover more ground in less time. KEP modules are systematically organized to enhance your knowledge one at a time, so you can more fully explore each subject. And, each course builds upon previous courses to provide a context for better understanding.

KEP materials are revised on an on-going basis to reflect the latest technologies, development methods, and testing techniques that we discover through our involvement with software testing and development organizations.

The learning teams are organized to replicate the typical work environment. So, while you’re learning the latest theories and techniques, you’re also perfecting your skills at management, communications, and leadership - the type of skills that lead to success in today’s business world.

Above all else, the KEP is focused on your career success. For this reason, our programs are continually updated to include the skills and expertise that are in high demand. In addition, projects are assigned that can be made applicable to your expected job.

**SQA LABS VISION**

To aggressively consolidate and confirm our position as the world’s premier software engineering and quality assurance service provider and a leading source of Software Engineering professionals /talent and information for global organizations.

**Resources and Services:**

In addition to its extensive software and materials library, SQA Labs provides various resources and services from around the world to its students, staff and faculty. Career planning and coaching, along with other services, are available to help you on your international career path.

- Individualized instruction, with limited students per class
- Extensive software library
- CBT library
- Video based training library
- Textbooks and training materials developed to meet the needs of the course participants
- High end computer equipment and computer software
- 24/7 access to all facilities
- Advance career planning & preparation
