## -Fall 2005 - 21

$$
\begin{aligned}
& \text { > } 1: 2: 3:[\text { Haskell: } \\
& {[1,2,3]} \\
& \text { Prolog: }
\end{aligned}
$$

- Both Haskell and Prolog build up lists using cons-cells.
- In Haskell the cons-operator is :, in Prolog ..

372 -Fall 2005-21
Matching Lists - [Head Tail]

|  | A |  | $F$ | $A \equiv F$ | variable subst. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| [] |  | [] |  | yes |  |
| [] |  | a |  | no |  |
| [a] |  | [] |  | no |  |
| [ []] |  | [] |  | no |  |
| [a\| | [b, c] ] | L |  | yes | $\mathrm{L}=[\mathrm{a}, \mathrm{b}, \mathrm{c}]$ |
| [a] |  | [ H | \| T] | yes | $\mathrm{H}=\mathrm{a}, \mathrm{T}=[]$ |

Matching Lists - [ Head

| $A$ | $F$ |  | $A \equiv F$ | variable subst. |
| :---: | :---: | :---: | :---: | :--- |
| $[\mathrm{a}, \mathrm{b}, \mathrm{c}]$ | $[\mathrm{H}$ | $\mathrm{T}]$ | yes | $\mathrm{H}=\mathrm{a}, \mathrm{T}=[\mathrm{b}, \mathrm{c}]$ |
| $[\mathrm{a}, \mathrm{l}, 2]]$ | $[\mathrm{H}$ | $\mathrm{T}]$ | yes | $\mathrm{H}=\mathrm{a}, \mathrm{T}=[[1,2]]$ |
| $[[1,2], \mathrm{a}]$ | $[\mathrm{H}$ | $\mathrm{T}]$ | yes | $\mathrm{H}=[1,2], \mathrm{T}=[\mathrm{a}]$ |
| $[\mathrm{a}, \mathrm{b}, \mathrm{c}]$ | $[\mathrm{X}, \mathrm{Y}, \mathrm{c}]$ | yes | $\mathrm{X}=\mathrm{a}, \mathrm{Y}=\mathrm{c}$ |  |
| $[\mathrm{a}, \mathrm{Y}, \mathrm{c}]$ | $[\mathrm{X}, \mathrm{b}, \mathrm{Z}]$ | yes | $\mathrm{X}=\mathrm{a}, \mathrm{Y}=\mathrm{b}, \mathrm{Z}=\mathrm{c}$ |  |
| $[\mathrm{a}, \mathrm{b}]$ | $[\mathrm{X}, \mathrm{c}]$ | no |  |  |

(1) member1 $(X,[Y \mid-]):-X=Y$.
(2) member1 $(X,[-\mid Y])$ :- member1 $(X, Y)$.
(1) member2 (X, [X|_]).
(2) member2 $\left(X,\left[\_\mid Y\right]\right)$ :- member2 $(X, Y)$.
(1) member3(X, [Y|Z]) :-X = Y; member3(X,Z).

372 -Fall 2005 - 21

## Prolog Lists — Member...

```
?- member(x, [a, b, c, x, f]).
    yes
?- member(x, [a, b, c, f]).
    no
?- member(x, [a, [x, y], f]).
    no
?- member(Z, [a, [x, y], f]).
    Z = a
    Z = [x, y]
    Z = f
```

Prolog Lists - Append
this one this one makes
(1) append ([], L, L)
(2) append ([X|L1], L2, [X|L3]) :append (L1, L2, L3).

1. Appending $L$ onto an empty list, makes $L$.
2. To append $L_{2}$ onto $L_{1}$ to make $L_{3}$
(a) Let the first element of $L_{1}$ be the first element of $L_{3}$.
(b) Append $L_{2}$ onto the rest of $L_{1}$ to make the rest of $L_{3}$.

## Prolog Lists - Append. . .

Prolog Lists - Append.

## Prolog Lists — Using Append

1. append ([a,b], $[1,2], L)$

- What's the result of appending $[1,2]$ onto $[a, b]$ ?

2. append ( $[a, b],[1,2],[a, b, 1,2])$

- Is $[a, b, 1,2]$ the result of appending $[1,2]$ onto [a,b]?

3. append ([a,b], L, $[a, b, 1,2])$

- What do we need to append onto [a,b] to make [a,b, 1, 2]?
- What's the result of removing the prefix $[a, b]$ from [a,b, 1, 2]?

4. append (L, $[1,2]$, $[a, b, 1,2])$

- What do we need to append $[1,2]$ onto to make [a,b,1,2]?
- What's the result of removing the suffix $[1,2]$ from $[\mathrm{a}, \mathrm{b}, 1,2$ ]?

5. append (L1, L2, $[a, b, 1,2])$

- How can the list $[a, b, 1,2]$ be split into two lists L1 \& L2?
-Fall 2005 - 21
[13]

372 -Fall 2005-21
[14]

## Prolog Lists — Using Append. . .

```
?- append(L1, L2, [a,b,c]).
    L1 = []
    L2 = [a,b,c] ;
    L1 = [a]
    L2 = [b,c] ;
    L1 = [a,b]
    L2 = [c] ;
    L1 = [a,b,c]
    L2 = [] ;
    no
```

## Prolog Lists — Using Append. . .

## Prolog Lists — Reusing Append

## Prolog Lists — Reusing Append. . .

member Can we split the list $Y$ into two lists such that $X$ is at the head of the second list?
adjacent Can we split the list $Z$ into two lists such that the two element $X$ and $Y$ are at the head of the second list?
last Can we split the list Y into two lists such that the first list contains all the elements except the last one, and X is the sole member of the second list?

```
member(X, Y) :- append(_, [X|Z], Y).
    ?- member(x, [a,b,x,d]).
adjacent(X, Y, Z) :- append(_, [X,Y|Q], Z).
    ?- adjacent (x,y,[a,b,x,y,d]).
last(X, Y) :- append(_, [X], Y).
    ?- last(x, [a,b,x]).
```

## Prolog Lists — Reverse

- reverse1 is known as naive reverse.
- reverse1 is quadratic in the number of elements in the list.
- From The Art of Prolog, Sterling \& Shapiro pp. 12-13, 203.
- Is the basis for computing LIPS (Logical Inferences Per Second), the performance measure for logic computers and programming languages. Reversing a 30 element list (using naive reverse) requires 496 reductions. A reduction is the basic computational step in logic programming.

## Prolog Lists — Reverse. . .

- reverse1 works like this:

1. Reverse the tail of the list.
2. Append the head of the list to the reversed tail.

- reverse 2 is linear in the number of elements in the list.
- reverse2 works like this:

1. Use an accumulator pair In and Out
2. In is initialized to the empty list.
3. At each step we take one element (x) from the original list ( $z$ ) and add it to the beginning of the In list.
4. When the original list ( $z$ ) is empty we instantiate the out list to the result (the In list), and return this result up through the levels of recursion.

## Prolog Lists — Reverse. . .

```
reverse1([], []).
reverse1([X|Q], Z) :-
    reverse1(Q, Y), append(Y, [X], Z).
reverse2(X, Y) :- reverse2(X, [], Y).
reverse2([X|Z], In, Out) :-
    reverse(Z, [X|In], Out).
reverse2([], Y, Y).
```

372 -Fall 2005-21
[22]

## Prolog Lists — Delete. . .

delete one Remove the first occurrence.
delete_all - Remove all occurrences.
delete_struct - Remove all occurrences from all levels of a list of lists.

## delete_one

1. If $X$ is the first element in the list then return the tail of the list.
2. Otherwise, look in the tail of the list for the first occurrence of $X$.

## Prolog Lists — Delete. . .

## delete_all

1. If the head of the list is $X$ then remove it, and remove $X$ from the tail of the list.
2. If $X$ is not the head of the list then remove $X$ from the tail of the list, and add the head to the resulting tail.
3. When we're trying to remove $X$ from the empty list, just return the empty list.

## Prolog Lists — Delete. . .

- Why do we test for the recursive boundary case (delete_all (X, [], [])) last? Well, it only happens once so we should perform the test as few times as possible.
- The reason that it works is that when the original list (the second argument) is [], the first two rules of delete_all won't trigger. Why? Because, [] does not match [H|T], that's why!

## Prolog Lists — Delete...

Prolog Lists — Delete.

## Prolog Lists — Delete. . .

(1) delete_struct (X, $\mathrm{X} \mid \mathrm{Z}], \mathrm{Y})$ :delete_struct (X, Z, Y).
(2) delete_struct (X,[V|Z],[Q|Y]):$\mathrm{X} \backslash==\mathrm{V}$, delete_struct ( $\mathrm{X}, \mathrm{V}, \mathrm{Q}$ ), delete_struct (X, $Z, Y$ ).
(3) delete_struct (X, [], []).
(4) delete_struct (X, Y, Y).

## delete_struct

1. The first rule is the same as the first rule in delete_all.
2. The second rule is also similar, only that we descend into the head of the list (in case it should be a list), as well as the tail.
3. The third rule is the catch-all for lists.
4. The last rule is the catch-all for non-lists. It states that all objects which are not lists (atoms, integers, structures) should remain unchanged.
```
delete_one(X,[X|Z],Z).
```

delete_one(X,[X|Z],Z).
delete_one(X,[V|Z],[V|Y]) :-
delete_one(X,[V|Z],[V|Y]) :-
X \== V,
X \== V,
delete_one(X,Z,Y).
delete_one(X,Z,Y).
delete_all(X,[X|Z],Y) :- delete_all(X,Z,Y).
delete_all(X,[X|Z],Y) :- delete_all(X,Z,Y).
delete_all(X,[V|Z],[V|Y]) :-
delete_all(X,[V|Z],[V|Y]) :-
X \== V,
X \== V,
delete_all(X,Z,Y).
delete_all(X,Z,Y).
delete_all(X,[],[]).

```
delete_all(X,[],[]).
```

- 

## Prolog Lists — Delete. . .

```
permutation(X,[Z|V]) :-
    delete_one(Z,X,Y),
    permutation(Y,V).
permutation([],[]).
ordered([X]).
ordered([X,Y|Z]) :-
    X =< Y,
    ordered([Y|Z]).
naive_sort(X, Y) :-
    permutation(X, Y),
    ordered(Y).
```

- This is an application of a Prolog cliche known as
naive_sort

## Sorting - Naive Sort. . .

## permutation

1. If the list is not empty we:
(a) Delete some element z from the list
(b) Permute the remaining elements
(c) Add z to the beginning of the list

When we backtrack (ask permutation to generate a new permutation of the input list), delete_one will delete a different element from the list, and we will get a new permutation.
2. The permutation of an empty list is the empty list.

- Notice that, for efficiency reasons, the boundary case is put after the general case.

## Sorting - Naive Sort. . .

delete_one Removes the first occurrence of x (its first argument) from $v$ (its second argument).

- Notice that when delete_one is called, its first argument (the element to be deleted), is an uninstantiated variable. So, rather than deleting a specific element, it will produce the elements from the input list (+ the remaining list of elements), one by one:
?- delete_one (X, $[1,2,3,4], Y)$.
$X=1, Y=[2,3,4]$;
$X=2, Y=[1,3,4]$;
$X=3, Y=[1,2,4]$;
$X=4, Y=[1,2,3]$;
no.

The proof tree in the next slide illustrates permutation $([1,2,3], V)$. The dashed boxes give variable values for each backtracking instance:
First instance: delete_one will select $X=1$ and $Y=[2,3]$. $Y$ will then be permuted into $\mathrm{Y}^{\prime}=[2,3]$ and then (after having backtracked one step) $\mathrm{Y}^{\prime}=[3,2]$. In other words, we generate $[1,2,3]$, $[1,3,2]$.
Second instance: We backtrack all the way back up the tree and select $X=2$ and $Y=[1,3]$. $Y$ will then be permuted into $Y^{\prime}=[1,3]$ and then $Y^{\prime}=[3,2]$. In other words, we generate $[2,1,3]$, $[2,3,1]$.

Third instance: Again, we backtrack all the way back up the tree and select $X=3$ and $Y=[1,2]$. We generate $[3,1,2],[3,2,1]$.
?- permutation([1,2,3],V).
$\mathrm{V}=[1,2,3]$;
$\mathrm{V}=[1,3,2]$;
$\mathrm{V}=[2,1,3]$;
$\mathrm{V}=[2,3,1]$;
$\mathrm{V}=[3,1,2]$;
$\mathrm{v}=[3,2,1]$;
no.

372 -Fall 2005-21
[38]

## Permutations

- Prolog strings are lists of ASCII codes.
- "Maggie" = [77,97,103,103,105,101]
aless (X,Y) :-
name (X,Xl), name(Y,Yl),
alessx (Xl,Yl).
alessx([], [_|-]). alessx([X|-],[Y|-]) :-X X . alessx([A|X],[A|Y]) :- alessx(X,Y).

## Mutant Animals

## Mutant Animals.

- From Prolog by Example, Coelho \& Cotta.
- We're given a set of words (French animals, in our case).
- Find pairs of words where the ending of the first one is the same as the beginning of the second.
- Combine the words, so as to form new "mutations".

1. Find two words, y and z .
2. Split the words into lists of characters. name (atom, list) does this.
3. Split Y into two sublists, Y 1 and Y 2.
4. See if $z$ can be split into two sublists, such that the prefix is the same as the suffix of $Y$ (Y2).
5. If all went well, combine the prefix of $Y(Y 1)$ with the suffix of $Z(z 2)$, to create the mutant list $X$.
6. Use name to combine the string of characters into a new atom.

372 -Fall 2005-21
[42]

## Mutant Animals. . .

```
```

mutate(M) :-

```
```

mutate(M) :-
animal(Y), animal(Z), Y \== Z,
animal(Y), animal(Z), Y \== Z,
name(Y,Ny), name(Z,Nz),
name(Y,Ny), name(Z,Nz),
append(Y1,Y2,Ny), Y1 \==[],
append(Y1,Y2,Ny), Y1 \==[],
append(Y2, Z2, Nz), Y2 \== [],
append(Y2, Z2, Nz), Y2 \== [],
append(Y1,Nz,X), name(M,X).
append(Y1,Nz,X), name(M,X).
animal(alligator). /* crocodile*/
animal(alligator). /* crocodile*/
animal(tortue). /* turtle */
animal(tortue). /* turtle */
animal(caribou). /* caribou */
animal(caribou). /* caribou */
animal(ours). /* bear */
animal(ours). /* bear */
animal(cheval). /* horse */
animal(cheval). /* horse */
animal(vache). /* cow */
animal(vache). /* cow */
animal(lapin). /* rabbit */

```
```

animal(lapin). /* rabbit */

```
```

?- mutate (X).

```
X = alligatortue ; /* alligator+ tortue */
X = caribours ; /* caribou + ours */
X = chevalligator ; /* cheval + alligator*/
X = chevalapin ; /* cheval + lapin */
X = vacheval /* vache + cheval */
```

- Lists are nested structures
- Each list node is an object
- with functor . (dot).
- whose first argument is the head of the list
- whose second argument is the tail of the list
- Lists can be split into head and tail using [H|T].
- Prolog strings are lists of ASCII codes.
- name ( $\mathrm{X}, \mathrm{L}$ ) splits the atom $X$ into the string $L$ (or vice versa).
