1

What is Prolog?

2 What is Prolog?

- Prolog is a language which approaches problem-solving in a *declarative* manner. The idea is to define *what* the problem is, rather than *how* it should be solved.
- In practice, most Prolog programs have a procedural as well as a declarative component — the procedural aspects are often necessary in order to make the programs execute efficiently.

3 What is Prolog?

Algorithm = Logic + Control Robert A. Kowalski

Prescriptive Languages:

- Describe *how* to solve problem
- Pascal, C, Ada,...
- Also: Imperative, Procedural

Descriptive Languages:

- Describe *what* should be done
- Also: Declarative

Kowalski's equation says that

- Logic – is the specification (what the program should do)
- Control – what we need to do in order to make our logic execute efficiently. This usually includes imposing an execution order on the rules that make up our program.

4

Objects & Relationships

5 Objects & Relationships

Prolog programs deal with

- objects, and
- relationships between objects

English:

"Christian likes the record"

Prolog:

```
likes(christian, record).
```

6

Facts

7 Record Database

- Here's an excerpt from Christian's record database:

```
is_record(planet_waves).
is_record(desire).
is_record(slow_train).

recorded_by(planet_waves, bob_dylan).
recorded_by(desire, bob_dylan).
recorded_by(slow_train, bob_dylan).

recording_year(planet_waves, 1974).
recording_year(desire, 1975).
recording_year(slow_train, 1979).
```

8 Record Database...

- The data base contains *unary facts* (`is_record`) and *binary facts* (`recorded_by, recording_year`).
- The fact

  `is_record(slow_train)`

  can be interpreted as

  `slow_train` *`is-a-record`*

- The fact `recording_year(slow_train, 1979)` can be interpreted as *the recording year of slow_train was 1979.*

9

Conditional Relationships

10 Conditional Relationships

- Prolog programs deal with conditional relationships between objects.

English:

"C. likes Bob Dylan records recorded before 1979"

Prolog:

```
likes(christian, X) :-
      is_record(X),
      recorded_by(X, bob_dylan),
      recording_year(X, Year),
      Year < 1979.
```

11 Conditional Relationships. . .

- The rule

  ```
  likes(christian, X) :-
        is_record(X),
        recorded_by(X, bob_dylan),
        recording_year(X, Year),
        Year < 1979.
  ```

  can be restated as

  > "Christian likes `X`, if `X` is a record, and `X` is recorded by Bob Dylan, and the recording year is before 1979."

- Variables start with capital letters.
- Comma (",") is read as *and*.

12

Asking Questions

13 Asking Questions

Prolog programs

- solve problems by asking questions.

English:

"Does Christian like the albums *Planet Waves* & *Slow Train*?'

Prolog:

```
?- likes(christian, planet_waves).
yes
?- likes(christian, slow_train).
no
```

14 Asking Questions...

English:

"Was *Planet Waves* recorded by Bob Dylan?"

"When was *Planet Waves* recorded?"

"Which album was recorded in 1974?"

Prolog:

```
?- recorded_by(planet_waves, bob_dylan).
   yes

?- recording_year(planet_waves, X).
   X = 1974

?- recording_year(X, 1974).
   X = planet_waves
```

15 Asking Questions...

In Prolog

- `","` (a comma), means `"and'`

English:

"Did Bob Dylan record an album in 1974?"

Prolog:

```
?- is_record(X),
      recorded_by(X, bob_dylan),
      recording_year(X, 1974).
yes
```

16 Asking Questions...

Sometimes a query has more than one answer:

- Use `";"` to get all answers.

English:

"What does Christian like?"

Prolog:

```
?- likes(christian, X).
   X = planet_waves ;

   X = desire ;

no
```

17 Asking Questions...

Sometimes answers have more than one part:

English:

"List the albums and their artists!"

Prolog:

```
?- is_record(X), recorded_by(X, Y).
X = planet_waves,
Y = bob_dylan ;
X = desire,
Y = bob_dylan ;
X = slow_train,
Y = bob_dylan ;
no
```

18

Recursive Rules

19 Recursive Rules

"People are influenced by the music they listen to.

People are influenced by the music listened to by the people *they* listen to."

```
listens_to(bob_dylan, woody_guthrie).
listens_to(arlo_guthrie, woody_guthrie).
listens_to(van_morrison, bob_dylan).
listens_to(dire_straits, bob_dylan).
listens_to(bruce_springsteen, bob_dylan).
listens_to(björk, bruce_springsteen).

influenced_by(X, Y) :- listens_to(X, Y).
influenced_by(X, Y) :- listens_to(X,Z),
                       influenced_by(Z,Y).
```

20 Asking Questions...

English:

"Is Björk influenced by Bob Dylan?"

"Is Björk influenced by Woody Guthrie?"

"Is Bob Dylan influenced by Bruce Springsteen?"

Prolog:

```
?- influenced_by(bjork, bob_dylan).
yes
?- influenced_by(bjork, woody_guthrie).
yes
?- influenced_by(bob_dylan, bruce_s).
no
```

21 Visualizing Logic

- *Comma* (`,`) is read as `and` in Prolog. Example: The rule

```
person(X) :- has_bellybutton(X), not_dead(X).
```

  is read as

  "X is a person if X has a bellybutton and X is not dead."

- *Semicolon* (`;`) is read as `or` in Prolog. The rule

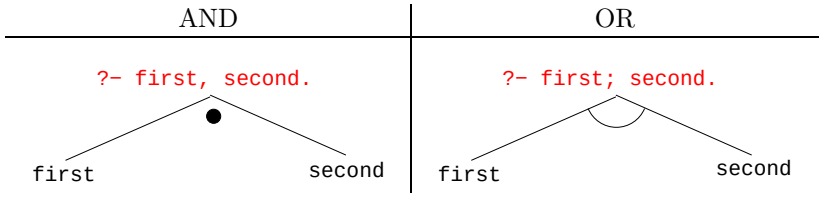
```
person(X) :- X=adam ; X=eve ;
             has_bellybutton(X).
```

  is read as

  "X is a person if X is adam or X is eve or X has a bellybutton."

22 Visualizing Logic...

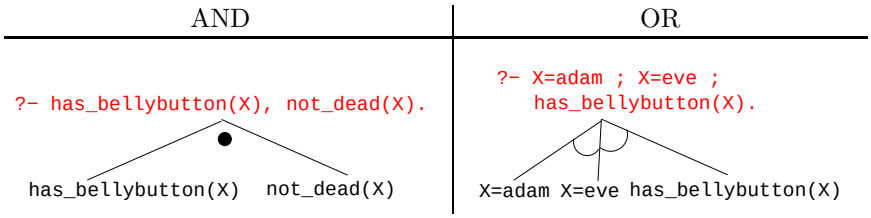
- To visualize what happens when Prolog executes (and this can often be very complicated!) we use the following two notations:



- For `AND`, both legs have to succeed.
- For `OR`, one of the legs has to succeed.

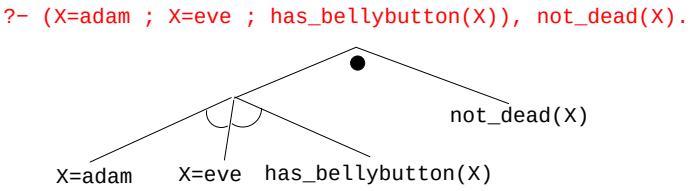
23 Visualizing Logic. . .

- Here are two examples:



24 Visualizing Logic. . .

- `and` and `or` can be combined:



- This query asks

  "Is there a person X who is adam, eve, or who has a bellybutton, and who is also not dead?"

25

How does Prolog Answer Questions?

26 Answering Questions

```
(1)   scientist(helder).
(2)   scientist(ron).
(3)   portuguese(helder).
(4)   american(ron).
(5)   logician(X) :- scientist(X).
(6)   ?- logician(X), american(X).
```

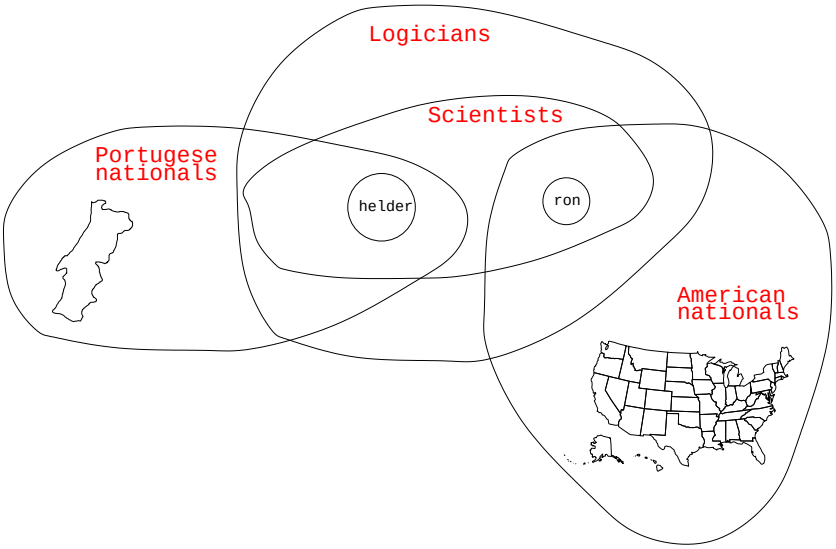
- The rule (5) states that

  "Every scientist is a logician"

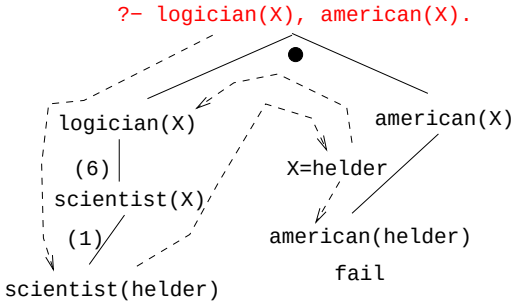
- The question (6) asks

  "Which scientist is a logician *and* an american?"

27 Answering Questions...

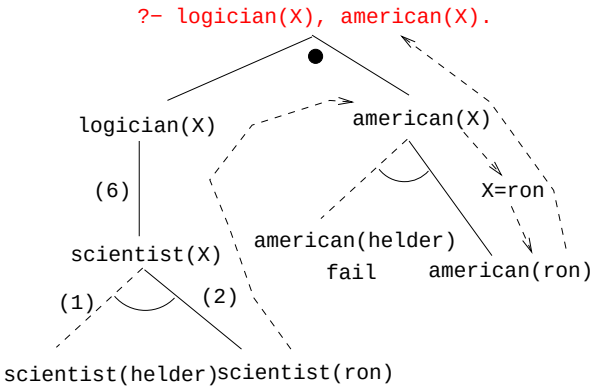


28 Answering Questions...



```
(1)   scientist(helder).
(2)   scientist(ron).
(3)   portuguese(helder).
(4)   american(ron).
(5)   logician(X) :- scientist(X).
(6)   ?- logician(X), american(X).
```

29 Answering Questions...



30 Answering Questions...

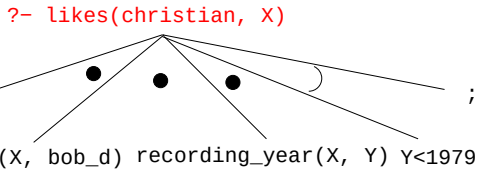
```
is_record(planet_waves).  is_record(desire).
is_record(slow_train).

recorded_by(planet_waves, bob_dylan).
recorded_by(desire, bob_dylan).
recorded_by(slow_train, bob_dylan).

recording_year(planet_waves, 1974).
recording_year(desire, 1975).
recording_year(slow_train, 1979).

likes(christian, X) :-
      is_record(X), recorded_by(X, bob_dylan),
      recording_year(X, Year), Year < 1979.
```

31 Answering Questions...



is_record(X)	artist(X, bob_d)	recording_year(X, Y)	Y<1979
X = planet_waves		Y=1979	succeed
X = desire		Y=1975	succeed
X = slow_train		Y=1974	fail

32 Answering Questions...

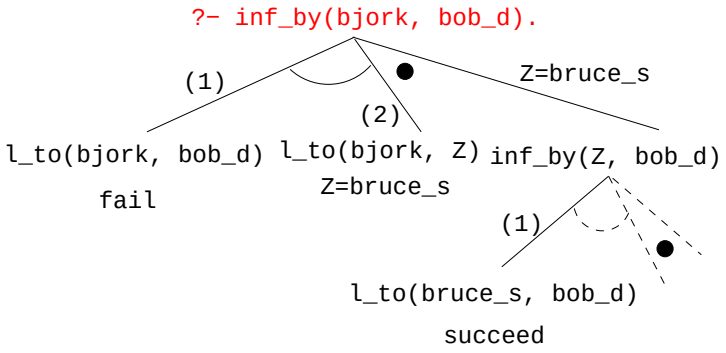
```
listens_to(bob_dylan, woody_guthrie).
listens_to(arlo_guthrie, woody_guthrie).
listens_to(van_morrison, bob_dylan).
listens_to(dire_straits, bob_dylan).
listens_to(bruce_springsteen, bob_dylan).
```

```
listens_to(björk, bruce_springsteen).

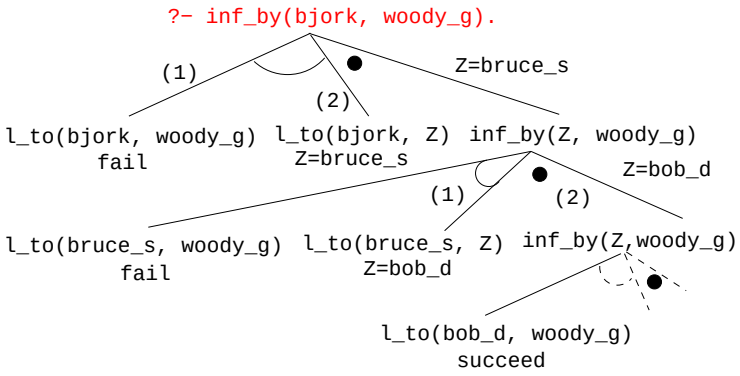
(1)   influenced_by(X, Y) :- listens_to(X, Y).
(2)   influenced_by(X, Y) :-
         listens_to(X, Z),
         influenced_by(Z, Y).

?- influenced_by(bjork, bob_dylan).
?- inf_by(bjork, woody_guthrie).
```

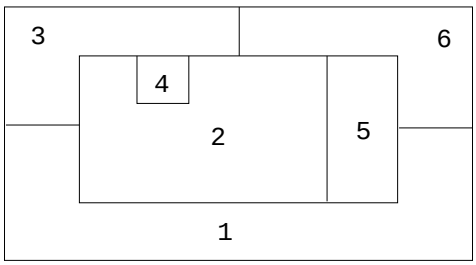
33 Answering Questions...



34 Answering Questions...



35 Map Coloring



"Color a planar map with at most four colors, so that contiguous regions are colored differently."

36 Map Coloring...

A coloring is OK iff

1. The color of Region 1 $\neq$ the color of Region 2, and
2. The color of Region 1 $\neq$ the color of Region 3,...

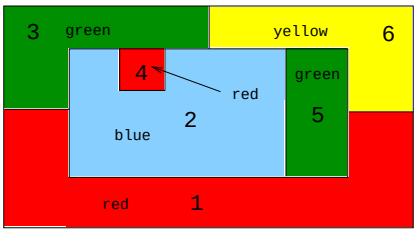
```
color(R1, R2, R3, R4, R5, R6) :-
   diff(R1, R2), diff(R1, R3), diff(R1, R5), diff(R1, R6),
   diff(R2, R3), diff(R2, R4), diff(R2, R5), diff(R2, R6),
   diff(R3, R4), diff(R3, R6), diff(R5, R6).

diff(red,blue).  diff(red,green).  diff(red,yellow).
diff(blue,red).  diff(blue,green).  diff(blue,yellow).
diff(green,red).  diff(green,blue).  diff(green,yellow).
diff(yellow, red).diff(yellow,blue).  diff(yellow,green).
```

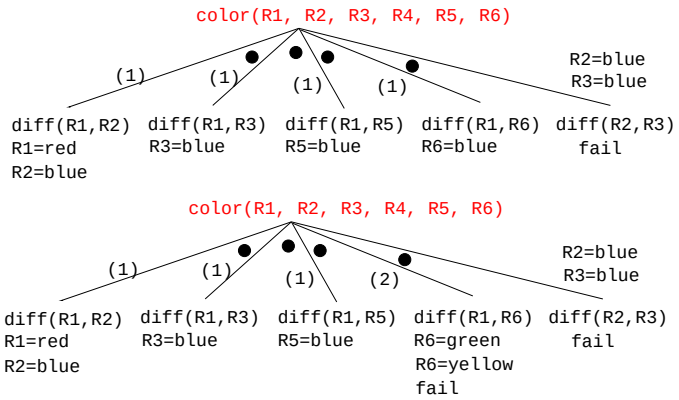
37 Map Coloring...

```
?- color(R1, R2, R3, R4, R5, R6).
R1 = R4 = red, R2 = blue,
R3 = R5 = green, R6 = yellow ;

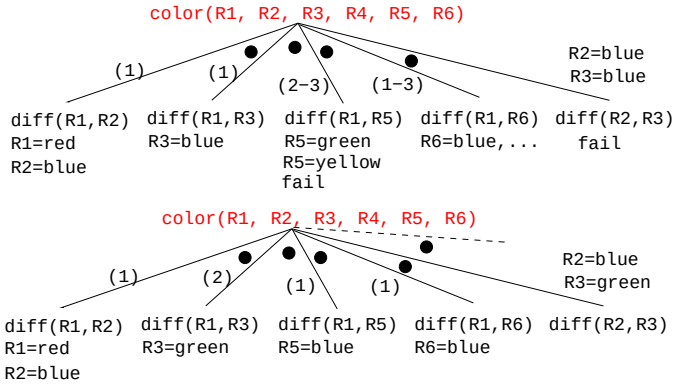
R1 = red, R2 = blue,
R3 = R5 = green, R4 = R6 = yellow
```



38 Map Coloring – Backtracking



39 Map Coloring – Backtracking



40 Working with gprolog

- `gprolog` can be downloaded from here: `http://gprolog.inria.fr/`.
- `gprolog` is installed on `lectura` (it's also on the Windows machines) and is invoked like this:

```
> gprolog
GNU Prolog 1.2.16
| ?- [color].
| ?- listing.
go(A, B, C, D, E, F) :- next(A, B), ...
| ?- go(A,B,C,D,E,F).
A = red ...
```

41 Working with gprolog...

- The command `[color]` loads the prolog program in the file `color.pl`.
- You should use the texteditor of your choice (`emacs`, `vi`,...) to write your prolog code.
- The command `listing` lists all the prolog predicates you have loaded.

42 Working with gprolog...

45 Prolog So Far

- A Prolog program consists of a number of *clauses*:

  Rules – Have `head` + `body`:

  - Can be recursive

Facts
  - Head but no body.
  - Always true.

46 Prolog So Far...

- A clause consists of

  atoms Start with lower-case letter.

  variables Start with upper-case letter.

- Prolog programs have a
  - Declarative meaning
    - The relations defined by the program
  - Procedural meaning
    - The order in which goals are tried

47 Prolog So Far...

- A question consists of one or more goals:
  - `?- likes(chris, X), smart(X).`
  - `","` means `and`
  - Use `";"` to get all answers
  - Questions are either
    - Satisfiable (the goal succeeds)
    - Unsatisfiable (the goal fails)
  - Prolog answers questions (satisfies goals) by:
    - instantiating variables
    - searching the database sequentially
    - backtracking when a goal fails
