Introduction

Prolog Structures

- Aka, **structured** or **compound** objects
- An object with several components.
- Similar to Pascal's **Record**-type, C's **struct**, Haskell's **tuples**.
- Used to group things together.

- functor arguments
- $\overbrace{\text{course}}^{\text{functor}}(\text{prolog}, \text{chris}, \text{mon}, 11)$
 - The **arity** of a functor is the number of arguments.

Example – Course

Structures – Courses

- Below is a database of courses and when they meet. Write the following predicates:
 - lectures(Lecturer, Day) succeeds if Lecturer has a class on Day.
 - duration(Course, Length) computes how many hours Course meets.
 - occupied(Room, Day, Time) succeeds if Room is being used on Day at Time.

```
% course(class, meetingtime, prof, hall).  
course(c231, time(mon,4,5), cc, plt1).  
course(c231, time(wed,10,11), cc, plt1).  
course(c231, time(thu,4,5), cc, plt1).  
course(c363, time(mon,11,12), cc, slt1).  
course(c363, time(thu,11,12), cc, slt1).
```

Structures – Courses...

```
lectures(Lecturer, Day) :-  
    course(Course, time(Day, _, _), Lecturer, _).  
  
duration(Course, Length) :-  
    course(Course,  
           time(Day, Start, Finish), Lec, Loc),  
    Length is Finish - Start.  
  
occupied(Room, Day, Time) :-  
    course(Course,  
           time(Day, Start, Finish), Lec, Room),  
    Start =< Time,  
    Time =< Finish.
```

Structures – Courses...

```
course(c231, time(mon,4,5), cc, plt1).  
course(c231, time(wed,10,11), cc, plt1).  
course(c231, time(thu,4,5), cc, plt1).  
course(c363, time(mon,11,12), cc, slt1).  
course(c363, time(thu,11,12), cc, slt1).
```

```
?- occupied(slt1, mon, 11).
```

yes

```
?- lectures(cc, mon).
```

yes

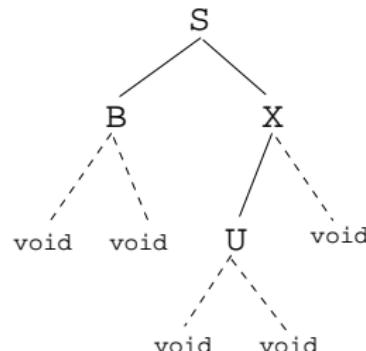

Example – Binary Trees

Binary Trees

- We can represent trees as nested structures:

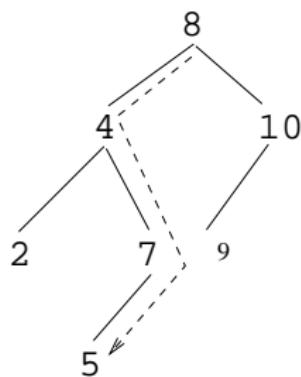

```
tree(Element, Left, Right)
```

```
tree(s,  
      tree(b, void, void),  
      tree(x,  
            tree(u, void, void),  
            void)).
```

Binary Search Trees

- Write a predicate `member(T,x)` that succeeds if `x` is a member of the binary search tree `T`:

```
atree(  
    tree(8,  
        tree(4,  
            tree(2,void,void),  
            tree(7,  
                tree(5,void,void),  
                void)),  
        tree(10,  
            tree(9,void,void),  
            void))).
```

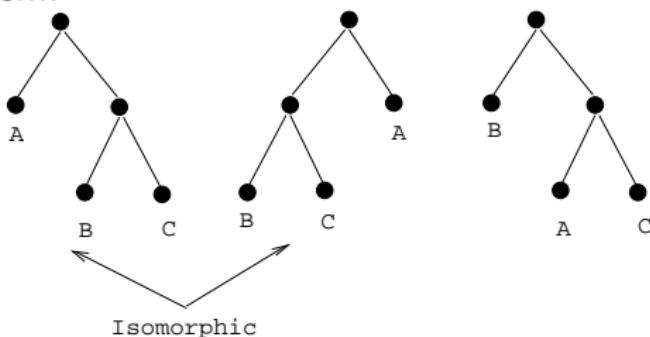

?- `atree(T),tree_member(5,T).`

Binary Search Trees...

```
tree_member(X, tree(X,_,_)).  
tree_member(X, tree(Y,Left,_)) :-  
    X < Y,  
    tree_member(Y, Left).  
tree_member(X, tree(Y,_,Right)) :-  
    X > Y,  
    tree_member(Y, Right).
```

Binary Trees – Isomorphism

Tree isomorphism:

Two binary trees T_1 and T_2 are **isomorphic** if T_2 can be obtained by reordering the branches of the subtrees of T_1 .

- Write a predicate `tree_iso(T1, T2)` that succeeds if the two trees are isomorphic.

Binary Trees – Isomorphism...

```
tree_iso(void, void).
```

```
tree_iso(tree(X, L1, R1), tree(X, L2, R2)) :-  
    tree_iso(L1, L2), tree_iso(R1, R2).
```

```
tree_iso(tree(X, L1, R1), tree(X, L2, R2)) :-  
    tree_iso(L1, R2), tree_iso(R1, L2).
```

- ➊ Check if the roots of the current subtrees are identical;
- ➋ Check if the subtrees are isomorphic;
- ➌ If they are not, backtrack, swap the subtrees, and again check if they are isomorphic.

Binary Trees – Counting Nodes

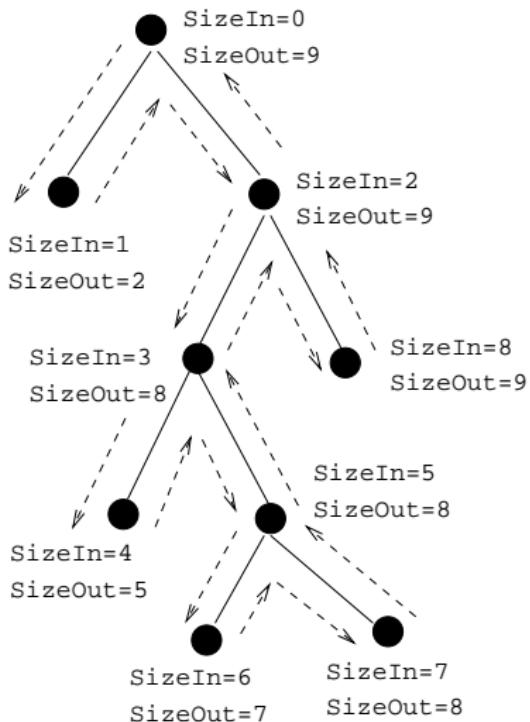

- Write a predicate `size_of_tree(Tree,Size)` which computes the number of nodes in a tree.

```
size_of_tree(Tree, Size) :-  
    size_of_tree(Tree, 0, Size).
```

```
size_of_tree(void, Size, Size).  
size_of_tree(tree(_, L, R), SizeIn, SizeOut) :-  
    Size1 is SizeIn + 1,  
    size_of_tree(L, Size1, Size2),  
    size_of_tree(R, Size2, SizeOut).
```

- We use a so-called **accumulator pair** to pass around the current size of the tree.

Binary Trees – Counting Nodes . . .

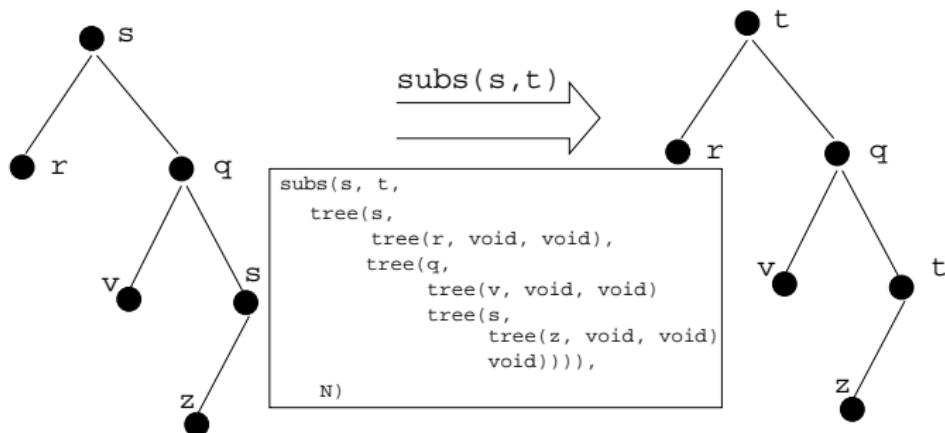

Binary Trees – Tree Substitution

- Write a predicate `subs(T1, T2, Old, New)` which replaces all occurrences of `Old` with `New` in tree `T1`:

```
subs(X, Y, void, void).  
subs(X, Y, tree(X, L1, R1), tree(Y, L2, R2)) :-  
    subs(X, Y, L1, L2),  
    subs(X, Y, R1, R2).  
subs(X, Y, tree(Z, L1, R1), tree(Z, L2, R2)) :-  
    X =\= Y, subs(X, Y, L1, L2),  
    subs(X, Y, R1, R2).
```

Summary

Prolog So Far...

- Prolog **terms**:

- atoms (a, 1, 3.14)
- structures

guitar(ovation, 1111, 1975)

- Infix expressions are abbreviations of “normal” Prolog terms:

infix	prefix
a + b	+(a, b)
a + b* c	+(a, *(b, c))
